

Developer Manual for Personal Information Manager (PIM)

Preparation Before Running Program

- In order to run and test our Personal Information Manager, you need to run it in the following environment and use our recommended IDE.
 - Python Version: 3.9.6 64-bit.
 - IDE: Visual Studio Code
 - Running Platform(OS): Windows 10/11 or MacOS Ventura

Running Program

- Developer could run the game in Visual Studio Code or terminal
 - When running the Personal Information Manager on Visual Studio Code
 1. Open the project file on Visual Studio Code
 2. Run PIRController.py in /PIM/controller path.

Compile

- Follow steps in “Running Program”, then will directly build “*pycache*” in different directory.

Debugging

- open the project folder in Visual Studio Code.
- Run PIRController.py by clicking the running button and “Debug Python File” in the upper right section.
